CHIRASIN CHUENTHED

SOFTWARE ENGINEER | REACT • JAVASCRIPT • ENTERPRISE WEB PLATFORMS

Bangkok / Pathum Thani, Thailand | 061-775-9598 | frongand1998@gmail.com | github.com/frongand1998

PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience delivering enterprise web applications for airline cargo, workforce and patrol operations, registration workflows, and real-time IoT platforms. Strong in React and JavaScript, with hands-on experience integrating GraphQL and REST APIs, Socket.IO events, CCTV playback, GIS maps, 3D visualization, complex forms, role-based access, and multi-environment deployments. Effective at taking ownership of established codebases, tracing business workflows, resolving production issues, and adapting shared platform capabilities across customer deployments.

TECHNICAL SKILLS

Frontend	React, JavaScript, TypeScript, Vite, Create React App, HTML, CSS, styled-components, Tailwind CSS, Ant Design, Material UI
Application Engineering	Redux Toolkit, Recoil, React Hook Form, reusable components, dynamic forms, role-based UI, responsive dashboards, micro-frontends
APIs and Data	GraphQL, Apollo Client, REST APIs, Socket.IO, Axios, PostgreSQL, MySQL, MongoDB
Maps, Media and Delivery	ArcGIS JavaScript API, Leaflet, Three.js, Chart.js, WebRTC/CCTV playback, Docker, Git, Jira, Figma

PROFESSIONAL EXPERIENCE

Sky AI / Sky Group — Software Engineer | *July 2021 – Present*

- Develop and maintain production web applications with cross-functional product, design, backend, QA, and operations teams, translating domain requirements into reliable user workflows.
- Own feature delivery across existing and newly inherited codebases, including code analysis, API integration, debugging, refactoring, release support, and customer-specific configuration.
- Build reusable components and shared patterns for complex forms, permissions, dashboards, notifications, maps, tables, and real-time operational interfaces.

CargoWork — AOTGA Cargo and Warehouse Management | *Year 1 | 2021–2022*

Large React application supporting airline cargo and warehouse operations.

- Implemented operational flows for inbound and outbound booking, master and house airway bills, flight preparation, shipment handling, warehouse services, delivery orders, and e-weight slips.
- Built document and finance-related interfaces for invoices, receipts, charge summaries, payment terms, airline reporting, and import/export tonnage reporting.
- Integrated GraphQL and REST services, role permissions, notifications, file/PDF workflows, and environment-specific builds across development, staging, pre-production, and production.

Metthier Open Platform and Operations Applications | *Year 2 | 2022–2023*

Shared enterprise platform combining micro-frontends, navigation, authentication, workspace context, patrol operations, and registration workflows.

- Contributed to a single-spa micro-frontend shell and shared header/sidebar modules, enabling workspace-aware navigation, authentication flows, module routing, and permission-based menus across multiple products.
- Developed patrol-management workflows covering checkpoints, inspection rounds, schedules, checklists, reports, QR-code printing, image uploads, comments, and GraphQL-based CRUD operations.
- Built paperless registration and verification interfaces with complex form validation, document handling, administrative review, and reusable UI patterns.

SELECTED PROJECT EXPERIENCE

MDSS Smart Operations Platform | *Year 3–Present | 2023–Present*

Real-time monitoring and incident-management platform for multi-workspace IoT and facility operations.

- Built operational dashboards, configurable widgets, time-series charts, device-status views, incident workflows, notifications, and workspace-scoped real-time updates with React, GraphQL, and Socket.IO.
- Developed 2D and 3D map experiences using Leaflet, ArcGIS, Mapbox, and Three.js, including clustered markers, floor/device visualization, GLTF scenes, interactive controls, and status-driven presentation.
- Implemented CCTV live-view and playback experiences, video-wall configuration, camera/device controls, timeline interaction, and integration with incident and operational workflows.
- Delivered specialized dashboards for camera history, intrusion detection, face counting, robotics, energy, parking, visitors, and workforce operations.

MDSS Configuration and Administration | *Year 3–Present | 2023–Present*

Administration application for configuring devices, users, workspaces, permissions, automation, and platform behavior.

- Implemented device and asset management, workspace administration, users and user groups, licensing, spare parts, audit logs, notification settings, and corrective/preventive work-order flows.
- Built face-recognition enrollment and update workflows, bulk import/export, configurable widgets and themes, drag-and-drop interfaces, validation, and GraphQL mutations.
- Created shared form and table components, permission providers, filters, pagination, status controls, and responsive UI patterns used across administration modules.

PERSONAL RESEARCH AND PROTOTYPING

Independent Web Research Repository — Ongoing

- Use personal web prototypes to explore application architecture, state management, UI patterns, APIs, data visualization, automation, and emerging development workflows outside production assignments.
- Apply findings from small experiments to improve implementation speed, component reuse, debugging, and technical decision-making in larger codebases.

ENGINEERING STRENGTHS

Codebase ownership: Quickly maps unfamiliar modules, dependencies, data flows, and business rules to continue delivery without unnecessary rewrites.

Enterprise frontend delivery: Builds maintainable interfaces for complex operational workflows, permissions, forms, maps, media, dashboards, and real-time state.

Cross-team collaboration: Works with backend, QA, product, and operations teams on API contracts, defects, release readiness, and customer-specific requirements.

EDUCATION

Bachelor of Computer Engineering, 2.79 GPA | Srinakharinwirot University, Thailand
